CODE AR 53 EFFIMERA IPL CRYO TABLE TOUCH SCREEN

The EFFIMERA IPL TOUCH SCREEN CRYO apparatus is fitted with an ample 5.7" graphic display which, enriched with touch-screen technology, makes human-machine interaction simpler and offers easy access to the various applications which can be set. The interface with icons and the graphic animations guide the operator step-by-step, considerably simplifying the programming procedure. Each single treatment parameter can be programmed simply at the "touch" of a finger.

EFFIMERA IPL TOUCH SCREEN CRYO uses a XENON 500w power lamp which can supply up maximum to 26J/cm². The handle provided allows treatment of an area of about 13 cm², reducing the length of the sessions and, therefore, the number of flashes required to complete the treatment. Thanks to it being highly tolerated and to its efficacy, the IPL photodepilation treatment can be applied to most body areas, both women and on men. In fact, in a few minutes it is possible to depilate very wide areas or, with the help of an area reducer, optimally put the finishing touches to circumscribed areas, such as the upper lip or the chin area. On completion of the depilation session the fallen hairs can be removed with a spatula, a small brush or using tonic to cleanse the part treated, whereas the remaining down will fall out spontaneously within one or two days.

CODE AR64+32.1 EFFIMERA AIR PRESSOMASS + LEGS BANDS

The new interface introduced in EFFIMERA AIR PRESSOMASS, which exploits the innovative graphic display, guides the operator step by step, thereby considerably simplifying the programming procedure. The electronic control of the various functions shown on the display is managed by a microprocessor which guarantees great versatility. In fact, it is possible to programme each individual parameter on the treatment, i.e. the inflation time, the pressure in the various sectors, as well as the inflation and deflation sequence of the latter. Setting can be carried out manually or by using preset and stored programmes.

The pressure of each individual output is controlled by a pressure sensor. Furthermore, EFFIMERA AIR PRESSOMASS is fitted with a safety device which intervenes when there are excessive pressure in the pneumatic circuit.

LASER HAIR REMOVAL R EFFIMERA AR 75 HP 800W 808 NM 40J

The spot surface of the spot has a size of 11x11mm so treatment can be performed at high speed. The sophisticated crystal cooling system integrated in the handpiece allows to operate with values of professional fluency, thus preserving the integrity of the skin and the Risk of burns, achieving highly performing and comfortable results for the customer.

CODE AR 56 EFFIMERA RF IN-ACTION TOUCH SCREEN+ TABLE CASE

EFFIMERA IN-ACTION RF Monopolar

is high-tech apparatus which exploits RF energy, i.e. selective thermolysis for aesthetic purposes, which stimulates the metabolism to renew existing collagen and to produce new collagen. The heat generated passes through the surface of the skin and accumulates in the deepest epidermal layers. The main benefit of this type of heat is that it skips the external layer of the skin in order to prevent surface damage. The technique used allows a "lifting effect" to be obtained, ideal for treating wrinkles, slack skin, cellulite and localised adiposity.

The special feature of EFFIMERA IN-ACTION RF is the use of the bipolar treatment method - a non-invasive technique which, however, obtains the results of a "surgical scalpel". The handles are fitted with a non-contact electronic sensor, aimed at constantly "reading" the variation in temperature of the area treated. The supply of energy is cut off once the value set is reached so as to avoid any possible scalds.

Massage bed plywood, mattress with shaped profile, hole facial, neck support pillow with vinyl white and roll holder shelf for products Cm 185x71x77

Trolley with three shelves made plywood. Wooden shelves.
Cm 50x37x80H

Shelf three shelves made plywood.
Cm 48x37x150H

Mini-Cabinet with sink and provision for Mixer+door with shelf.
Made of melamine in various essences.
Single lever with high leverage
clinic for Sink, height mouth
200mm. Italian production.
